The **prodisc® C** Total Disc Replacement

The **prodisc®** technology is the most studied and clinically-proven Total Disc Replacement system in the world with over 540 published studies and over 125,000 device implantations across 30 years of usage. With options for both lumbar and cervical disc replacements, **prodisc** is a versatile disc replacement—designed to provide relief from pain or other symptoms resulting from degenerative disc disease.

The diseased disc is removed and replaced with **prodisc C**, which has a unique central keel to provide immediate stability to the implant. After implantation, **prodisc C** provides height restoration—off-loading pinched nerves. The implant provides controlled and guided motion, shown to be safe and effective over the long term.

prodisc C is designed to enable normal motion in the spine and not alter loads on the facet joints, allowing not only a rapid return to an active lifestyle, but a chance to achieve new horizons.

Share this card with your doctor and ask whether **prodisc C** can help you rediscover your life, too.

CENTINEL SPINE®
